

See below a list of our vinyls and faux leathers that can be cleaned with a 90% water 10% Clorox bleach solution always followed by a thorough rinsing with a 100% water solution.

If the product is not rinsed with water following the bleach solution over time it could lose its soft texture and crack and peel. This is called plasticizer migration.

It is very important that anyone who uses the bleach solution adhere to these steps in order to prolong the life of the vinyl/faux leather.
